

Hi all

For those of you that use inReach, here is a screenshot of my location after turning the device on, not waiting for a GPS fix and sending a pre-set message.

To confirm you have a GPS fix, scroll to Location on the map screen, hit the checkmark, and wait for the screen to populate itself with your GPS location.

Only a problem on first use of day,... or if you turn your device on and off throughout the day (to save battery?). **OR, if you really have an emergency!!!!**

The lesson - ***Leave your device on during the day!***

Ciao
Richard Cherepak
